

PESCO Partners,

Knowing that everyone is overwhelmed and possibly frightened by the disruption caused by the COVID-19 pandemic, we would like to share with you the proactive approach that PESCO is taking to support you and your organization through this challenging and uncertain time. We will continue to provide updates as new information and situations arise.

We have structured the PESCO organization to meet the required delivery of both information and equipment. Critical engineering, design, sales, and back office support personnel are working both on site and remotely to assure that projects in the design phase are completed in a high quality and timely manner in order to start the manufacturing process and hit required delivery dates.

We are identifying and bringing in shop production employees that are required to hit critical deliveries. This will be a fluid situation as equipment is completed in various departments and new equipment is started.

PESCO is following COVID-19 protocols in strict compliance with the CDC, New Mexico Department of Health, and health organization best practices. These include:

1. Screening and logging of each person entering PESCO premises by taking their temperature and asking a series of questions regarding their exposure to COVID-19. All PESCO employees that answer “yes” to any question are asked to go home and monitor for 14 days.
2. All the safe practices that have been widely communicated, including strict adherence to social distancing, frequent workstation sterilization, hand washing, and general awareness training for all personnel.
3. Regularly scheduled cleaning and disinfecting practices of frequently touched surfaces in the entire facility.

In closing, we know this period will require sacrifice and flexibility from us all, however as always, we are committed to supporting you and your business through these challenging times while doing our part to prevent the spread of the corona virus.

Best Regards,

Kyle Rhodes  
President/CEO
